

WHAT IS CLAIMED IS:

1. An object controlling method comprising the steps of:
 recognizing voice;
 determining a parameter correlated to an object;
 5 altering the parameter in response to the recognized
 voice; and
 controlling the object based on the altered parameter.

2. The method according to Claim.1, further comprising the
 10 step of:
 moving the object along a predetermined route.

3. The method according to Claim.1, further comprising the
 step of:
 15 controlling the object in response to operation through
 an operating means.

4. A computer-readable recording medium having recorded
 therein an object controlling program to be executed on a
 20 computer, the program comprising:
 a step for recognizing voice;
 a step for determining a parameter correlated to an
 object;
 a step for altering the parameter in response to the
 25 recognized voice; and
 a step for controlling the object based on the altered

parameter.

5. The computer-readable recording medium according to Claim 4, the program further comprising:

- 5 a step for moving the object along a predetermined route.

6. The computer-readable recording medium according to Claim 4, the program further comprising:

- 10 a step for controlling the object in response to operation through an operating means.

7. A device for executing an object controlling program, comprising:

- 15 a voice unit that recognizes input voice;
determining means for determining a parameter correlated to an object;
changing means for varying the parameter in response to the recognized voice; and
20 control means for controlling the object based on the changed parameter.

8. The device according to Claim.7, further comprising:
moving means for moving the object along a
25 predetermined route.

9. The device according to Claim.7, further comprising:
operating unit that controls the object.

10. An object controlling program to be executed on a
5 computer comprising:

a step for recognizing voice;

a step for determining a parameter correlated to an
object; and

a step for altering the parameter in response to the

10 recognized voice; and

a step for controlling the object based on the altered
parameter.
